(54) DIGITAL COMPOUNDER

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a sheet (cover original), to which a document ID mark is added, simultaneously with document image registration by printing out a document image with document ID mark generated together with the processing of storage into a storage means.

SOLUTION: A document ID encode means 4 is provided and the document ID mark corresponding to a document ID is generated when storing document image data corresponding to any specified document into storage means 97 and 100. Next, this generated document ID mark is synthesized with a document image corresponding to the specified document by a pattern synthesizing means 8. As the document image with document ID mark (cover original), this synthesized image is printed out together with storage processing for document images. Concerning the document ID mark added to the cover original, the document image of correspondent document ID can be selected by decoding this document ID mark through a document ID decode means. Because of this selection, processing such as document image extraction, facsimile transmission, coupling of plural documents and deletion of specified document image is enabled.

LEGAL STATUS

- [Date of request for examination]
- [Date of sending the examiner's decision of rejection]
- [Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
- [Date of final disposal for application]
- [Patent number]
- [Date of registration]
- [Number of appeal against examiner's decision of rejection]
- [Date of requesting appeal against examiner's decision of rejection]
- [Date of extinction of right]
